PRODUCTIVITY

reliability

ExtremeZ·IP

How productive is your business? If your employees are like many local area network users, they may spend a lot of time waiting. Waiting while they send, receive, and open files. Waiting for a job to print. Waiting…instead of working. Now you can eliminate that costly downtime—and raise your productivity and profitability— with the ExtremeZ-IP® file sharing and print services software from Group Logic.

- Works faster
- Saves money
- Boosts customer satisfaction
- Improves efficiency
- Pays for itself in reduced downtime— in just a few weeks!
- *And there's more...*

GroupLogic
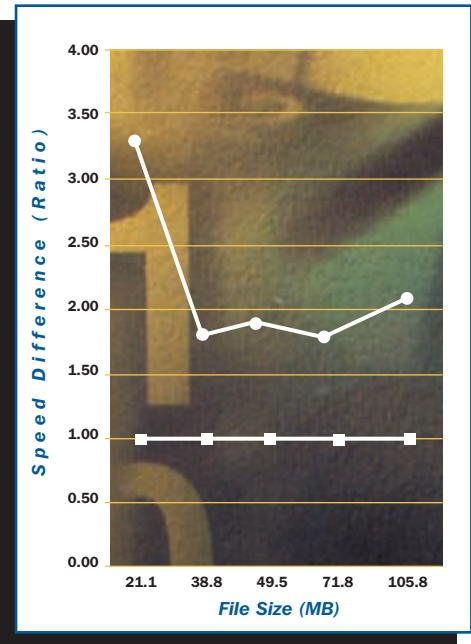

Work Faster, Save Money with ExtremeZ·IP

ExtremeZ·IP connects Macintosh® computers to a Microsoft® Windows® Server or Workstation/Professional using the TCP/IP protocol. Developed to work with Windows NT, ExtremeZ·IP has been optimized to take advantage of the superior speed of Windows 2000. This powerful combination delivers the throughput two to five times faster than Windows NT or 2000 alone. Faster than any other third-party throughput enhancement software. The fastest solution available today.

Whether your network includes hundreds of graphic design and production professionals or fewer than ten, your connections will be faster and more efficient with ExtremeZ·IP. And by replacing wait time with work time, the ExtremeZ·IP software will pay for itself fast—about three weeks in a 25-client environment. The larger your business, the more you save.

Extreme Z·IP
Windows 2000

ExtremeZ·IP sends files to the server as much as four times faster than Windows 2000's native tools.

Extreme Z·IP
Windows 2000

ExtremeZ·IP retrieves files from the server up to twice as fast as Windows 2000's native tools.

"We installed a very large video serving system with 96 smooth Mac Connections—our goal was 90! With native tools and other third-party products, our results ranged from jerky video to blue screens of death. ExtremeZ·IP is remarkable."
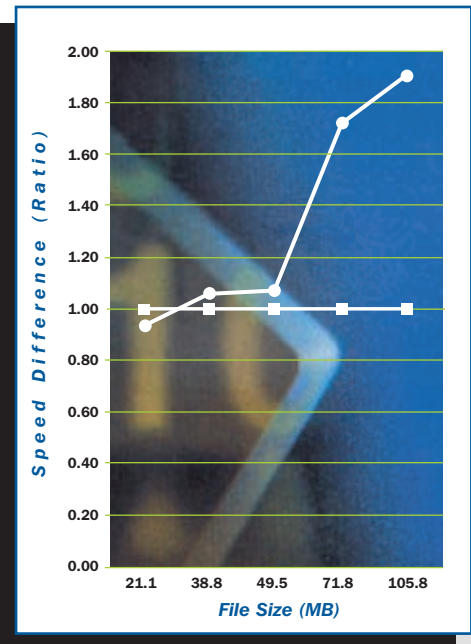

Jim Webb
Director, Information Technology
School of Education and Social Policy
Northwestern University
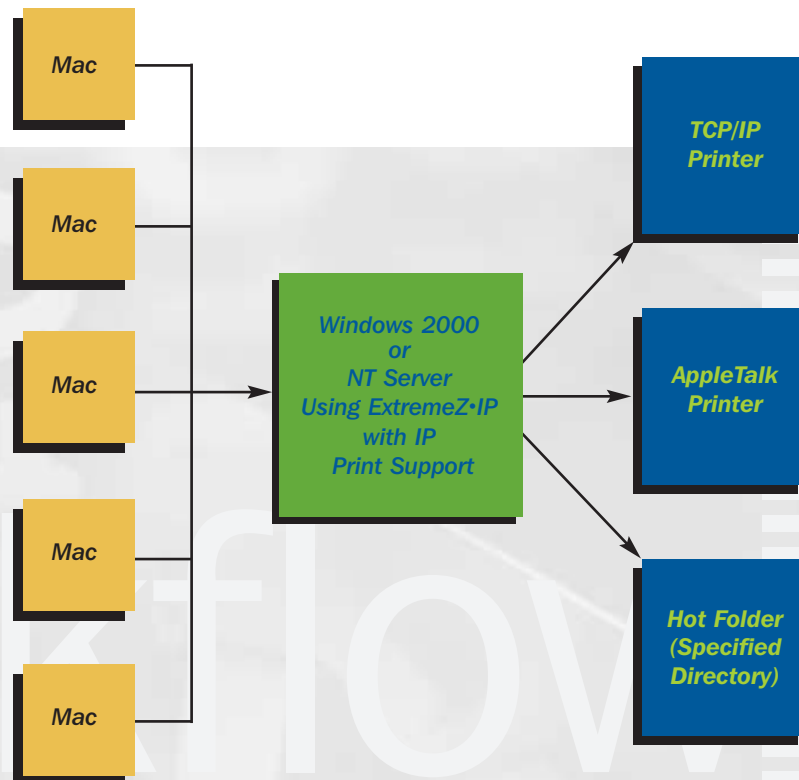

Make Printing Easier with ExtremeZ·IP

TCP/IP is today's network protocol—and tomorrow's. With ExtremeZ·IP's optional IP Print Support™ feature, you can take advantage of this industry standard across your entire network. You can now eliminate AppleTalk® completely. Or, if necessary, isolate it to support older devices. No more performance degradation from unnecessary chat on the network. Your Macs can speak to other devices through the ExtremeZ·IP server using TCP/IP.

ExtremeZ·IP with IP Print Support puts you in control of your printing options. Choose any output device—a Windows or AppleTalk printer, or even a hot folder where the job can be processed by additional software such as an RIP or an OPI server. Right from your Mac workstations, your users can easily set up desktop printers to use IP printing services.

"ExtremeZ·IP improved our performance by 200% in a snap on file transfers. And your IP Print Support is a very welcome solution for us. It even allows me to drop PS in a folder! Very nice…"

Rene Girardin
NetFlux Automation, Inc.

Both users and administrators will find the printing process easier to manage, faster, and more efficient with IP Print Support.
